

Additional Ventures' mission is to cure single ventricle heart disease through transformative research and strategic investments that revolutionize treatment & care.

Below is a snapshot of our core programs. Collectively, these initiatives comprise essential components of our strategy for curing single ventricle.

Cures Collaborative

A multidisciplinary 9-person team working together to develop a tissue-engineered solution that can improve cardiac function and reduce poor outcomes associated with single ventricle heart disease.

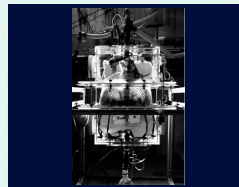

Collaborative Sciences Award

A high-touch, targeted grant program — funded jointly with the American Heart Association — that allows researchers to make significant scientific advancements in the field of single ventricle sequelae. This year, we awarded 5 teams, with a total investment of \$13M.

Single Ventricle SOURCE

A first-of-its-kind genomic sequencing study aimed at uncovering the causes of single ventricle heart disease, comorbidities, and sequelae. SOURCE launched in December 2024.

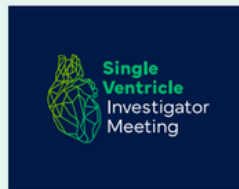

Translational Accelerator

A first-of-its-kind accelerator that bridges the “valley of death” in single ventricle science by removing early-stage roadblocks for researchers, starting with the AV-CTIP Device Innovation Award in partnership with the Consortium for Technology & Innovation in Pediatrics (CTIP)

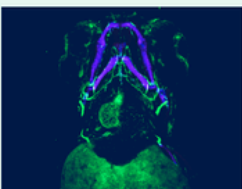

Expansion Award

A one-time \$50,000 award that enables teams to rapidly develop, test, and implement novel, high-risk ideas in the single ventricle space.

SVIM

A biennial scientific conference bringing together a multidisciplinary group of established and emerging scientists interested in investigating single ventricle origins, outcomes, care, and cures.

Single Ventricle Research Fund

A 3-year annual research award program that provides foundational support for single ventricle researchers, including \$600,000 for independent investigators and \$300,000 for postdoctoral fellows. This year, we awarded 14 teams, with a total investment of \$9.25M.

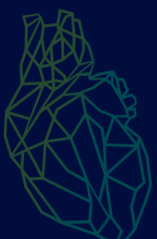

For-Profit Investments

Strategic commercial investments in product-oriented organizations with complementary capabilities, made to advance innovation through multiple pipelines and help life-changing products reach patients.

SAVE THE DATE

2026 Single Ventricle Investigator Meeting

The premier, multidisciplinary convening focused exclusively on accelerating progress in single ventricle heart disease

October 7-9, 2026 | Denver, CO
